VERIDAPT

VERIDAPT **to Showcase Real-Time Bulk Inventory Monitoring Innovations at The Fertilizer Show 2026**

Tampa, Florida, November 2026 – **VERI**DAPT, a provider of digital inventory monitoring and reconciliation technology, will showcase its approach to improving bulk inventory visibility, operational efficiency and supply chain performance at The Fertilizer Show 2026, taking place November 18–19 in Tampa, Florida.

As part of the event, Damir Hasagic, VP Strategy & Growth at **VERI**DAPT, will present **"Turning Inventory into Intelligence: How Digital Monitoring Strengthens Fertilizer Supply Chains,"** exploring how trusted physical inventory data can support stronger operational and financial decision-making.

The Fertilizer Show comes at a time when rising input costs, supply chain pressures and market volatility are placing greater emphasis on operational efficiency and inventory accountability across the fertilizer industry.

Fertilizer producers manage significant volumes of bulk materials across outdoor stockpiles, warehouses, silos, tanks and distribution facilities. Maintaining accurate inventory records across these environments is essential for effective planning, cost control and financial reconciliation.

Traditional inventory processes often rely on manual measurements, periodic surveys or estimates, creating potential discrepancies between physical stock and recorded inventory. These differences can affect inventory confidence, operational planning and working capital visibility.

VERIDAPT's Adapt**VISION** platform uses LiDAR (Light Detection and Ranging) technology to monitor dry bulk materials and calculate stockpile volumes, providing operators with accurate, automated inventory measurements. For liquid bulk operations, **VERI**DAPT integrates tank-level measurement technologies to support inventory visibility and reconciliation across storage environments.

By connecting physical measurements with digital inventory records, **VERI**DAPT helps businesses identify discrepancies, reduce manual processes and make more informed operational and commercial decisions.

“Inventory discrepancies are not impacting the P&L. They can affect purchasing decisions, working capital and logistics planning” said Damir Hasagic, VP Strategy & Growth at **VERI**DAPT. “When businesses have reliable visibility of what they physically hold against what their systems report, they are better positioned to manage costs, strengthen accountability and make informed decisions across their operations.”

As fertilizer companies increasingly explore AI, advanced analytics and automation, the quality of the underlying operational data becomes critical.

Rather than requiring customers to adopt a proprietary AI environment, **VERI**DAPT provides a trusted digital inventory data foundation that can integrate with existing enterprise systems and support customers' own analytics, AI and automation initiatives.

This enables organizations to better identify anomalies, analyse inventory movements, improve forecasting and strengthen logistics planning using reliable physical inventory information.

VERIDAPT's participation in The Fertilizer Show reflects its commitment to supporting industries where accurate bulk material measurement, inventory reconciliation and operational visibility are essential to business performance.

Meet VERIDAPT in Tampa

VERIDAPT will be exhibiting at **Booth 1222** during The Fertilizer Show 2026, November 18–19, in Tampa, Florida.

Attendees are invited to meet the team to discuss how digital monitoring and inventory reconciliation can support greater visibility, efficiency and accountability across fertilizer production, storage and distribution.

To arrange a meeting with **VERID**APT during the event, contact **damir.hasagic@veridapt.com**.

About VERIDAPT

VERIDAPT specializes in digital monitoring and reconciliation of high-value bulk commodities, connecting physical operations with digital systems to provide reliable visibility of materials stored and moved across stockpiles, silos, tanks and other bulk storage environments.

Its technology supports complex commodity supply chains where accurate, timely and trusted inventory data is essential to operational efficiency, financial accountability and commercial decision-making.

VERIDAPT. Always Innovating. Always Reliable.
