

## AdaptGO FMS Portable Device

### The Cost-Effective Introduction to Digitised Fuel Management in Mining

### Solution Overview

AdaptGO solution is the quick and easy way to optimise fuel management using a portable device on the mine site.

AdaptGO allows users to capture, verify and reconcile all dispense transactions from service trucks, tanks or other dispensing equipment without the need to install hardware.

AdaptGO tracks fuel and lubricants and captures vital data in VERIDAPT's secure cloud-based AdaptIQ application, enabling real-time reconciliation in even the most remote and unsupervised areas.

### Value Proposition

AdaptGO portable device is a user-friendly and affordable introductory fuel management solution for mining companies and suppliers without upfront hardware installation costs.

AdaptGO grants users access to high availability AdaptIQ software to monitor site inventories and providing real-time data for detailed reports and analysis generating greater fuel efficiencies.

AdaptGO digitises your infield refuelling transactions into a single cloud platform and removes the need for manual reporting methods.

AdaptGO delivers total visibility and accountability for fuel movement at the mine or customer site while ensuring safe personnel operation.

## Features

AdaptGO has been developed to provide the most cost-effective, portable fuel management system available in mining.

AdaptGO fuel management portable device captures:

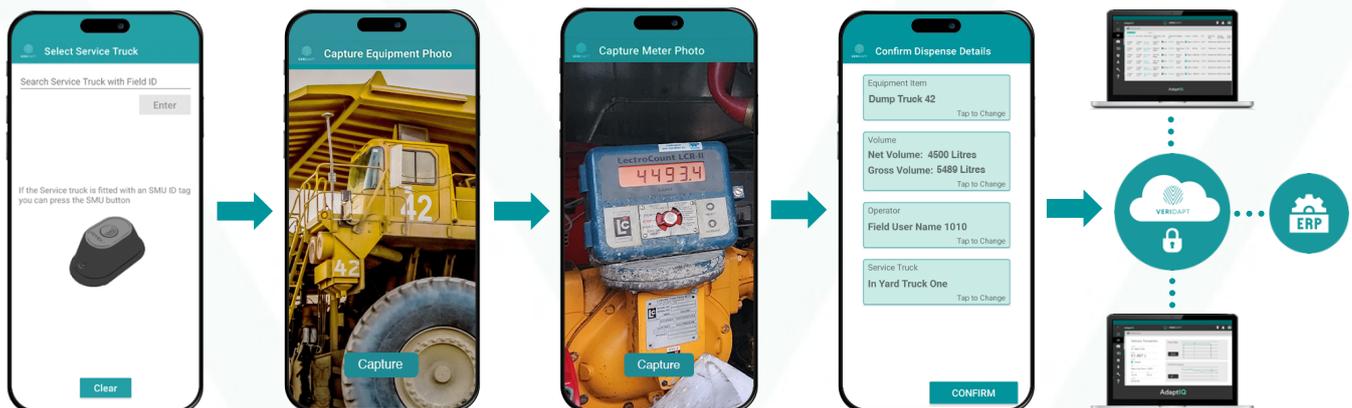

- Operator ID (by card swipe or pin entry)
- Equipment ID (Manual entry with authentication or AdaptSMU)
- Volume dispensed to equipment item
- Photo of displayed flowmeter dispense value
- GPS location of transaction
- Date and time of transaction

## Benefits

Digitised fuel distribution guides operators and suppliers through transactional data capture and supports overall usage reconciliation, while providing new operational insights to understand fleet efficiency and provide data for business decision making.

AdaptGO Fuel Management Mobile Device benefits include:

- Automatic digitisation of dispense transactions
- Reduced chances of manual error
- Elimination of paper records and emails
- Record and authorisation of each service truck operator
- Transfer of dispense data directly from mobile application to AdaptIQ software platform
- Access to all dispensing data on a single platform
- Access to ongoing **VERIDAPT** technology updates
- No hardware installation required
- Ideally suited for mobile fleet, supply companies or required short term hire arrangements
- Technology developed by the recognised leader in mine-site fuel management and integrated to leading software platform
- Designed for maximum personnel safety e.g. GPS location & no Internet access
