

Revolutionary ag tech solution monitors stockpiles in real-time & delivers unprecedented transparency

Challenge

A client highly cost-effective way to monitor massive stockpiles of grain. Why? To ensure its ability to finance and secure the option to purchase on-farm storage while reducing risk.

Solution

VERIDAPT installed innovative LIDAR-generated image and measurement technology within 24 hours to provide real-time images of the stockpile, valued up to \$4m in a pilot project. This represented a major leap from existing solutions, which only allowed for periodic or ad-hoc inspections.

Benefits

Transparent and continuous visibility of the stockpile and risk mitigation, like misappropriation and fraud, while improving on-farm storage financing. The VERIDAPT solution represented a minor capital outlay, while delivering 24/7 real-time monitoring and measurement, providing the required certainty for all stakeholders.
